## Experience

---

### Resolution Games — Stockholm, SE

*Tech Lead Project (Spatial Ops)* (March 2023 - Present)

*Gameplay Programmer* (Jul 2022 - Feb 2023)

- **Production & Delivery:** Directed end-to-end technical production for Spatial Ops (Auggie Award Best Game 2025), managing milestone planning, sprint cycles, and daily task distribution for an 8-engineer team.
- **External Vendor & Co-Dev Management:** Directed B2B production pipelines, managing deliverables and milestones for outsourced QA vendors, localization co-development studios, and contract audio/video engineers.
- **Cross-Functional Alignment:** Acted as the primary technical bridge across 10+ internal departments and external partners, coordinating dependencies and ensuring seamless feature integration from prototype to final release.
- **Technical PR & Media Partnerships:** Facilitated external review cycles by coordinating secure build distribution, technical access, and direct troubleshooting for media partners, influencers, and PR stakeholders.
- **Technical Feasibility & Scope:** Partnered directly with the Creative Lead to define feature roadmaps, evaluate technical viability, and proactively mitigate risks and bottlenecks before they impacted production timelines.
- **Backend Health & Live Monitoring:** Monitored third-party multiplayer backend health (Photon) alongside internal telemetry pipelines and crash reporting, ensuring stable server uptime and rapid resolution of live outages.
- **Pipeline & Tooling Optimization:** Championed the development of custom team tooling (Bot State Machine Editor, Campaign Event Designer) to empower designers and streamline content creation.
- **QA & Process Automation:** Spearheaded the integration of LLM-driven automated playtesting agents and AI workflows (Claude, Unity CLI) into the native pipeline, significantly accelerating QA iteration and root-cause bug analysis for the entire team.
- **Code & Development :** Implemented a 3D Grid A\* Pathfinding algorithm specifically optimized for flying AI agents to navigate dynamic, real-world room geometry via Spatial Mapping data.
- Implemented a NetworkObject/GameObject Pooling System
- Implemented UniTask for high-performance asynchronous operations.

### Deep Dive Studio — Singapore, SG

*Senior Gameplay Programmer* (Dec 2019 - Mar 2022)

- Led 3 engineers to successfully deliver core gameplay features for a high-fidelity fighting game Virtual Taekwondo, which was featured in the prestigious Olympic Esports Series.
- **Cloud Architecture & Technology Adoption:** Architected full-stack backend infrastructure using Node.js on AWS Lambda (Serverless), building high-scalability services to power match data, player telemetry, and core game logic. Initiated and managed technical discussions with AWS Game Tech representatives to bridge the gap in cloud technology adoption.
- Architected motion capture pipelines in Unreal Engine, implementing integration via Live Link and Animation Blueprints.
- Developed multiplayer networking system for a Go(Chess) game using gRPC in Go (backend) and Unity C# (client).

**Isentric Ltd — Jakarta, ID**

*Gameplay Programmer* (Mar 2019 - Dec 2019)

- Successfully shipped two mobile casino titles for the Android platform.
- Developed scripted AI using Behavior Trees to simulate realistic player patterns and improve user engagement for Poker and Capsa.

**Visual Expert Animation — Jakarta, ID**

*VR Game Developer* (Oct 2017 - Feb 2019)

- Engineered an interactive AR Wall Game utilizing Xbox Kinect for motion tracking and gesture recognition.
- Integrated hardware and software by developing a horse-racing game that utilized microcontrollers for custom motion detection.

**FXmedia Pte Ltd — Singapore, SG**

*Game Developer* (Sep 2016 - Sep 2017)

- Practising debugging and profiling to secure from any performance problems.
- Developed gamified e-learning platforms for high-profile clients, including NUS Nursing Studies and SATS Singapore (ground operations).

**Nusantara Beta Studio — Jakarta, ID**

*Game Developer* (Mar 2015 - Aug 2016)

- Implemented Object-Oriented Programming (OOP) principles in C# and Unity to enhance code maintainability and optimize the mobile game development lifecycle.

## Technical Skills

---

Languages: C#, C++, Javascript

Engine/ Frameworks: Unity, Unreal, Node.js

Tools: AWS (Gamelift, Lambda, DynamoDB, Cognito, API Gateway, Cloudwatch), Azure playfab, Photon, Google analytics, Unity crash report, Github action, Jenkins, Miro, Lucidchart, Jira, Favro, Notion, Git, UVC, Figma, Zeplin, Adobe Photoshop.

## Education

---

**Bachelor's degree, Computer Science**

Syarif Hidayatullah Jakarta Islamic State University

GPA 3.54/4.00

Cum Laude, Bank Indonesia Scholarship

Jakarta, ID

Aug 2012 - Nov 2018
