SUMMARY

Tech Lead and gameplay programmer with over 10 years of experience building and shipping PC, VR/MR, multiplayer and mobile games in Unity (C#) and Unreal Engine (C++). Currently at Resolution Games working on Spatial Ops, a mixed reality first-person shooter multiplayer. Strong in gameplay and AI systems, multiplayer networking, performance optimization, Unity editor tooling, backend services and AI-assisted automation.

TECHNICAL SKILLS

Languages: C#, C++, JavaScript, Python, Go (Golang)

Game Engines: Unity, Unreal Engine (C++, Blueprints)

Platforms: Desktop PC(Steam), Meta Quest, Pico, Apple Vision Pro (visionOS), Android

Multiplayer and Backend: Photon Fusion, AWS (GameLift, Lambda, DynamoDB, Cognito, API Gateway, CloudWatch), Node.js, gRPC, Azure PlayFab

Performance and Debugging: Unity Profiler, Memory Profiler, Profile Analyzer, Project Auditor, Unreal Insight, Xcode, Unity Crash Reporting, Google Analytics

Version Control and CI/CD: Git, Unity Version Control (Plastic SCM), GitHub Actions, Jenkins

Design and Project Tools: Jira, Favro, Notion, Miro, Lucidchart, Figma, Zeplin, Adobe Photoshop, Blender

AI Tools: Claude Code, Claude Design

WORK EXPERIENCE

Tech Lead, Spatial Ops

Resolution Games | Stockholm, Sweden | Mar 2023 - Present

- Led a team of 8 engineers to deliver Spatial Ops, a high-fidelity mixed reality (MR) first-person shooter (FPS) for Meta Quest and Apple Vision Pro, coordinating with more than 10 departments to integrate features across the project.
- Owned code team management, milestone planning and task distribution; partnered with the Creative Lead on the feature roadmap and technical feasibility.
- Implemented a 3D grid A* pathfinding system optimized for flying AI agents navigating dynamic, real-world room geometry from spatial mapping data.
- Built a NetworkObject/GameObject pooling system with UniTask for high-performance asynchronous operations in Photon Fusion multiplayer.
- Developed pre-fractured destructible walls, by procedurally generating the fracture pattern with a Voronoi noise algorithm.
- Engineered a deterministic, seed-based procedural world generator in Unity/C# using a river-network skeleton, fractal noise, stream-power hydraulic erosion and D8 flow-accumulation hydrology.
- Developed custom Unity editor tools, including a Bot State Machine Editor and a Campaign Event Designer, plus an AI agent-driven automated playtesting system that uses Claude (LLM) to process game state data and autonomously playtest builds.
- Improved stability, memory usage and frame rate using Unity Profiler, Memory Profiler, Profile Analyzer and Project Auditor; resolved native crashes in Xcode and built a Python crash-symbolication pipeline for IL2CPP builds.
- Integrated telemetry analytics and Unity crash and exception reporting to monitor live game health and resolve critical issues.
- Maintained the build machine and GitHub Actions CI/CD pipeline for multiplatform Unity builds (Steam desktop Windows/Mac, Meta Quest, Pico, Apple Vision Pro), with platform-specific package loading so each build includes only the packages its target needs.

Gameplay Programmer

Resolution Games | Stockholm, Sweden | Jul 2022 - Feb 2023

- Developed gameplay systems in Unity/C#; promoted to Tech Lead after eight months.

Senior Gameplay Programmer
Deep Dive Studio | Singapore | Dec 2019 - Mar 2022

- Engineered client-side multiplayer systems and core combat mechanics for Virtual Taekwondo in Unreal Engine, combining C++ and Blueprints to balance network performance with fast designer iteration.
- Architected a serverless backend in Node.js on AWS Lambda, building scalable services for match data, player telemetry and core game logic.
- Developed the multiplayer networking layer for an online Go board game using gRPC, with a Go (Golang) backend and a Unity C# client.
- Built motion capture pipelines in Unreal Engine using Live Link and Animation Blueprints.

Gameplay Programmer
Isentric Ltd | Jakarta, Indonesia | Mar 2019 - Dec 2019

- Developed AI opponents using behavior trees to simulate realistic player patterns and improve engagement in Poker and Capsa.
- Shipped two mobile casino card games on Android.

VR Game Developer
Visual Expert Animation | Jakarta, Indonesia | Oct 2017 - Feb 2019

- Built an interactive AR wall game using Microsoft Kinect for motion tracking and gesture recognition.
- Developed a horse-racing game that integrated custom microcontroller-based motion detection hardware.

Game Developer
FXmedia Pte Ltd | Singapore | Sep 2016 - Sep 2017

- Developed gamified e-learning platforms for high-profile clients, including NUS Nursing Studies (National University of Singapore).
- Debugged and profiled builds to identify and fix performance issues.

Game Developer
Nusantara Beta Studio | Jakarta, Indonesia | Mar 2015 - Aug 2016

- Applied object-oriented programming (OOP) principles in C# and Unity to improve code maintainability across the mobile game development lifecycle.

EDUCATION

Bachelor's Degree in Computer Science
Syarif Hidayatullah State Islamic University Jakarta | Jakarta, Indonesia | Aug 2012 - Nov 2018
GPA 3.54/4.00, Cum Laude; Bank Indonesia Scholarship recipient
